EDUCATION

University of Utah

Bachelor of Science in Computer Science. GPA: 3.8.

Salt Lake City, UT

May 2028

Salt Lake Community College

Associate of Computer Science and Information Systems.

Taylorsville, UT

Aug. 2025

EXPERIENCE

Technical Operations & Software Development

Sept. 2024 – Present

Technology Without Noise

West Valley City, UT

- Engineered and deployed 4 full-stack React.js client websites on AWS, generating a 10% increase in inbound leads
- Built a full-stack R&D dashboard (Node.js + PostgreSQL) consolidating product testing data, revenue, and R&D records
- Extended an eCommerce platform with automated stock tracking, reducing inventory discrepancy rate by 25% and improving purchase order visibility for the sales team
- Translated customer requirements into project deliverables across the full development lifecycle

Test Technician

May 2024 – Sept. 2024

Varex Imaging

Salt Lake City, UT

- Evaluated and diagnosed 20 imaging detectors per week under RMA warranty contracts, maintaining a 90% first-pass rate through systematic hardware debugging
- Reduced average repair turnaround by 1 business day via fault isolation and component-level repair across 50 failure types

Production Operator III

Aug. 2020 – May 2024

Varex Imaging

Salt Lake City, UT

- Assembled and tested 15 medical imaging detectors per day, performing rework in a highly regulated environment and maintaining strict electro-mechanical quality standards
- Facilitated daily handoff meetings with swing shift team of 5, relaying priorities and quality flags to ensure shift continuity

PROJECTS

Code Base QA

Python, Supabase, OpenAI and Anthropic APIs

- Built a retrieval-augmented generation (RAG) system that answers natural-language questions about a codebase by embedding code chunks and retrieving relevant context at query time
- Generated code embeddings via the OpenAI API and stored them in Supabase for semantic similarity search
- Integrated the Anthropic API to synthesize answers from retrieved snippets, handling chunking, prompt construction, and assembly

Hacker News Sentiment Analysis

Node.js, Express, PostgreSQL

- Built a full-stack web app that automatically collects Hacker News stories on a schedule and scores each as positive, negative, or neutral using keyword-based sentiment analysis
- Designed a REST API with Node.js and Express, integrated with PostgreSQL for persistent data storage
- Deployed backend to Railway with a cloud PostgreSQL database

London Transit Analysis

SQL, Pandas, Plotly

- Queried and aggregated Transport for London's Rolling Origin and Destination Survey dataset to surface ridership patterns, peak travel windows, and trip purpose breakdowns
- Structured findings to support service optimization decisions using large-scale public transit data

SKILLS

Languages: JavaScript, Python, SQL, Java, HTML/CSS

Frameworks: React.js, Node.js, Express, Spring Boot

Cloud & Tools: AWS Amplify, PostgreSQL, Supabase, Git, Railway, Vercel, VS Code

Data & Visualization: Pandas, Plotly

Relevant Coursework: Data Structures and Algorithms, Computer Architecture, Web Programming, OOP
